

INFO SHEET

StuDs 2013

Welcome to StuDs 2013!

StuDs is a project which gives your company a unique opportunity to make a personal connection with 27 computer science master students at one of Sweden's top universities - KTH Royal Institute of Technology in Stockholm.

StuDs is run by engaged students at the end of their studies, with the goal of making connections with interesting companies and getting to know the job market. The majority of the students have been engaged in extracurricular work with the students' union or its computer science section.

The StuDs project is run as a project course at KTH, whose course goals include developing student knowledge in entrepreneurship and project management. Its goals also include increased knowledge about the international job market; this is why we will end the course with a field trip to a country chosen by the students, to meet companies and at least one university.

During the school year of 2012-13 StuDs will arrange events with different companies, where we will get to know our future employers.

I hope your company is one of those who wants to get to know StuDs!

Charlie Lindviken
Project manager StuDs 2013

ps. The name StuDs is an acronym for computer science field trip in swedish, no pun intended! In fact, StuDs has 15 % women, much more than the average for computer science students.

EVENT

We offer a number of events with the goal of getting to know you and your company. We consider it very interesting to come to your office to see how you work, but obviously we can also arrange events in locations at KTH. If you have any ideas for events not listed below, suggestions are welcome!

Here are some example events that we offer:

LUNCH PRESENTATION - You come to KTH, to present your company over lunch.

Time: 1h

COMPANY MEET-UP - We suggest you start the meet-up with a presentation of your company. This would be followed by some mingle for an opportunity to get to know each other under more relaxed forms, and for us to learn about your work methods, tools, challenges or anything else that might be interesting.

Either you can take this opportunity to show off your office, or we will arrange it at KTH.

Time: 3-5h

A DAY WITH STUDS - If you're really looking to make a lasting impression on the students in StuDs, this is for you! Together we arrange a day of activities where we mix presentations about various aspects of your company with other activities. Why not have a programming competition?

Perhaps the day would be ended with a dinner and mingle to strengthen our new connections.

Time: 8-10h

CV DATABASE - As an addition to the events, you will get access to our CV database. It contains the CVs of all the students in StuDs and their contact information.
